

# Voola StableNFT

## What is a StableNFT?

StableNFT is a type of NFT with a stable value, achieved by linking it to a stablecoin and fiat currency. This combination offers a more predictable and secure investment option in the NFT market.

## Why StableNFT?

StableNFT, unlike stablecoins, has a more understandable model of issue and turnover (it can be compared with ordinary cash, where each bill is individual, and its value is secured by debt obligations).

## How does it work?

StableNFT purchased from a decentralized wallet are provided with a balance of stablecoins (USDT, USDC, BUSD) on a smart contract

StableNFT purchased for fiat currencies are provided with funds on correspondent and special accounts

**NAT is not a cryptocurrency, so the turnover of StableNFT is regulated in any country by property turnover, not financial.**

Payments to friends, utility payments, receiving payments from customers and partner programs

Replenishment and withdrawal: bank cards, SEPA, CHAPS, SWIFT, local transfers, digital currencies.

Financial messages in the WeOla messenger

### Example:

*You have a \$100 StableNFT coin. You need to withdraw \$50 to your bank card. When withdrawing funds, the coin is exchanged into two, with a face value of \$ 50, one of which is burned and converted into fiat money, and the second appears on the account balance, in the form of a new NFT coin, with a face value of \$ 50*

DIGITAL ART  
NFT COLLECTION

Browse and build your own collection of the world's most  
valuable, scarce digital art and NFTs. No middlemen.  
Creating a tamper-proof record of each artwork's history.

# StableNFT Business

### Safety

Since StableNFT is tied to a stable currency, its price does not change much, which makes it more predictable and reliable for investment.

### Uniqueness

StableNFTs represent unique and inimitable assets, which can increase their value and attract the attention of potential buyers.

### Flexibility

StableNFT can be easily transferred or sold as they are fully digital and highly portable.

### Easy accounting

StableNFT can be used to keep records of your trades.

### Exchange rate stability

StableNFTs have a price that is based on stable coins, so their price does not fluctuate as much as the price of conventional NFTs. This makes them more attractive to investors and buyers.

### Cloud transactions

StableNFT can be easily bought and sold via blockchain, which allows businesses to conduct transactions quickly and simply.

### Transparency

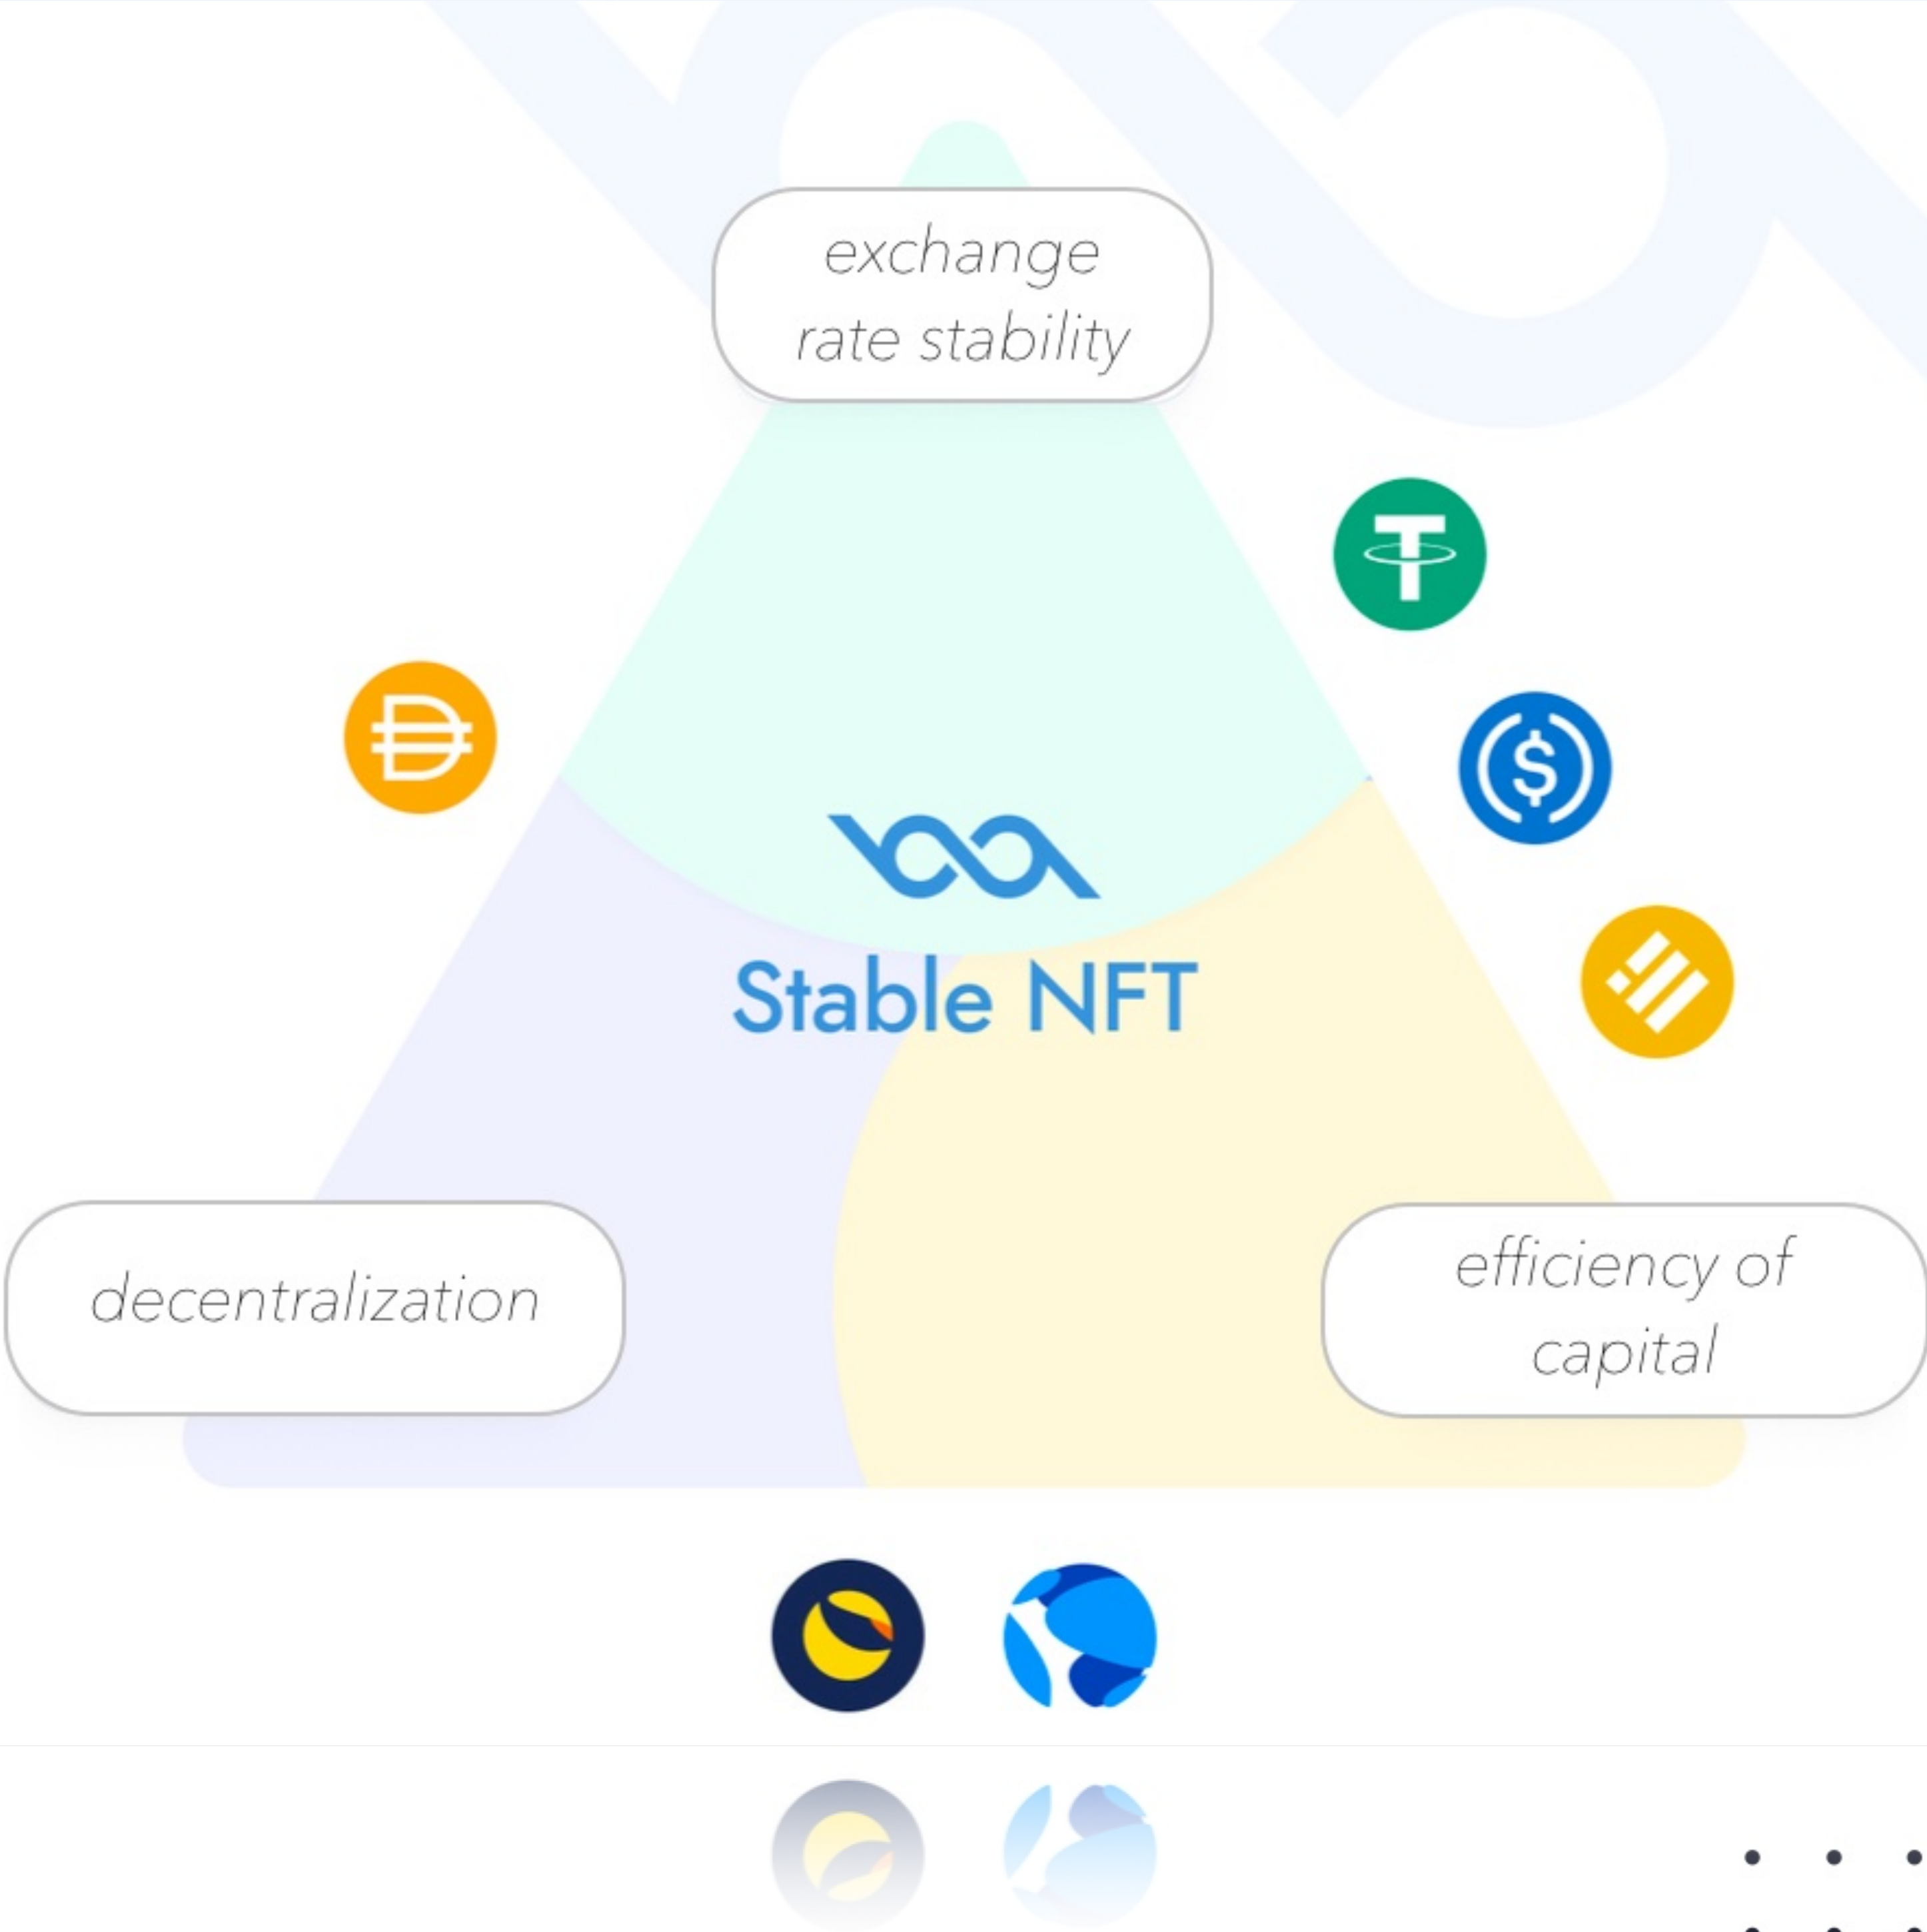

StableNFT allows you to track all transactions in real time, which increases transparency and trust in transactions.

### Digital uniqueness

StableNFT is a unique digital asset, which makes it suitable for presenting unique goods or services.

### The Stablecoin Trilemma

Voola elegantly solves the trilemma of stablecoins by algorithmically issuing StableNFT backed by business assets

### Example:

*Pawnshop section loans secured by gold jewelry, which are in his vault. Having passed the scoring in our system for secured gold, the pawnshop can issue a collection of StableNFT for issuing new loans.*
